## Blackpool City Learning Centre

As the UK's largest City Learning Centre, Blackpool CLC required state-of-the-art conference facilities to reflect its distinguished status and ensure that the Centre would prove a real asset to the community. Videoconferencing, professional training and presentation facilities, multiple projection screens, interactive whiteboards, integrated document camera, DVD, VCR and audio technology were all on the CLC's 'wish list'.

Anticipating a wide range of users from schools and libraries to businesses and local area forums, the intention was to install flexible teaching and presentation facilities that could be adapted to suit the user's requirements. Furthermore, as a pioneering facility in the community, aesthetics was a key consideration throughout the Centre.

BECTA-approved Promethean have recently installed AV and videoconferencing facilities in the main presentation room on the basis of their acclaimed track record in education, combined with a sophisticated approach to providing easy control of the equipment. The simplicity of the system is achieved by integrating DVD, VCR, video conferencing, audio signal and active whiteboard technologies through one computer system.

With so many sources of audio signal, ensuring the highest quality sound reproduction for clear and intelligible voice and music has been successfully achieved using Armstrong i-ceilings Pro Series Sound Panels.

**Blackpool City Learning Centre**  
- Blackpool, England

**Business:**  
Education
