Soundfield for the old school: the IRX is for the traditional classroom system

CIE-Group, the developer of the Soundfield classroom voice reinforcement into the UK education sector, has announced the launch of a new installed system, Soundfield IRX.

CIE's existing 'i-ceilings' Soundfield packages have now been joined by the introduction of the 'IRX' system as part of CIE's new 'Clever Little Box' UK-manufactured product range.

The IRX Kit has been developed for retrospective classroom installations and rooms without suspended ceilings. It has a newly developed wallmount combination amplifier/mic receiver coupled with FBT Studio 2 wallmount loudspeakers. IRX Soundfield also allows for integration of induction loop and personal hearing assistance systems.
